Mr. Yuxiao Ye

yuxiaoye@bit.edu.cn | +86 18519112663

Research Interests: (Multi-Agent) Deep Reinforcement Learning;

LLM-based Agents (Code Generation, Text-to-SQL, computer/GUI interaction);

EDUCATION

Beijing Institute of Technology (985 & 211 project university)

2022.09-Present

Supervisor: Prof. Chi (Harold) Liu, FIET, FBCS *MSc in Computer Science and Technology*

GPA: 3.6/4.0

Core Courses: Language Information Processing, Artificial Intelligence, Statistical Pattern Recognition, Information Retrieval **Beijing Institute of Technology** 2018.09-2022.06

BSc in Computer Science and Technology

GPA: 3.6/4.0 (rank: 7/56) Average Score: 88.6

Core Courses: Mathematical Analysis (93/100), Probability and Statistics (96/100), Algorithm Design and Analysis (95/100), Methods and Practice of Program Design (98/100), Data Structure (92/100), C Programming (94/100)

PUBLICATIONS

HONORS and **AWARD**

Grand Prize in "China Collegiate Computing Contest - AI Innovation Contest" (awarded 4/3400+)	2022
National Scholarship	2023
Outstanding Graduate Student, Beijing Institute of Technology	2023
Outstanding Undergraduate Student, Beijing Institute of Technology	2022
First-Class Academic Scholarship, Beijing Institute of Technology	2022, 2023

RESEARCH EXPERIENCES

Research Assistant, Mobile Crowdsensing and Combinatorial Optimization by (MA)DRL

2021.06-Present

- Proposed a MADRL framework, consisting of an intrinsic reward driven exploitation of individuality, enabling the accurate division of work, and a meta-learning based policy optimization, facilitating flexible agent's cooperation.
- Proposed a MADRL framework, with a traffic flow prediction mechanism based on spatial-temporal transformer, and a graph-based inter-agent communication method, to achieve efficient path planning for agents.
- Utilize transformer-based reinforcement learning to solve combinatorial optimization problems (particularly the twoechelon VRP), enhanced by a curriculum learning mechanism to mitigate non-stationarity among agents.

Intern, SenseTime Large Language Model Group

2023.12-2024.05

- Constructed a new Text-to-SQL benchmark to mitigate overfitting in LLMs, conducted comprehensive evaluations on five Text-to-SQL sub-tasks across six LLMs, identified the distinct capabilities and limitations of LLMs, and proposed optimal in-context learning solutions tailored to each sub-task.
- Proposed an LLM-based Text-to-SQL framework, consisting of an enhancement of in-context learning and schema linking, and a cross-consistency mechanism across different models, which achieves new SOTA results on the Spider benchmark with an accuracy of 87.6%.

COMPUTER SKILLS

Programming: Python, SQL, C/C++/C#, Java, Matlab

Software: Pytorch, Tensorflow, Hugging Face Transformers, DeepSpeed
